Book Description

Review The diversity of our cultures and personal identities masks the fact that we are one. In this brilliant, beautiful, and sweeping book, Christakis shows how eight universal human tendencies have bound us together, and given us dominion over our planet, our lives, and our common fate. A masterful achievement that is surely the best and most original science book of the year. bDaniel Gilbert, author of iStumbling on HappinessibNicholas Christakis is a pioneer in bridging the conceptual chasm between the choices of individual people and the shaping of an entire society. In this timely and fascinating book, he shows how the better angels of our nature, rooted in our evolutionary past, can bring forth an enlightened and compassionate civilization. bSteven Pinker, author of iEnlightenment Now ibIn a book of great wisdom and unusual breadth, Christakis pulls together philosophy, history, anthropology, sociology, genetics, and evolutionary biology to make an extraordinarily optimistic argument evolution has prewired us for goodness. At a moment when the dark history of the early twentieth century suddenly seems relevant again, its a relief to be reminded of why so many efforts to reengineer human society have failed and of why the better side of human nature often triumphs in the end. bAnne Applebaum, author of the Pulitzer prizewinning iGulag A HistoryibIn this wisely optimistic book, Christakis explores the evolutionary

imperative of forming bonds that are both cultural and genetic. His writing is colorful, personal, and often exuberant. bAndrew Solomon, author of iFar from the TreeibChristakis brings to general readers his most famous theory the genetic profile of both humans and animals dictates the types of societies that they create. Using a plethora of accessible examples that range from the social behavior of dolphins and chimpanzees to the tenets that link human behavior in a myriad of settings, from reality shows to arranged marriages, along with a generous...
